TRIPWIRE

As in, there's one way to go from here.

Up.

When it comes to a network, you can never have too much up. There's no such thing as too much service availability. Too much efficiency. Or too much accountability. Here's how to achieve all three.

And one way to get there.

Request the Yankee Group's January, 2004 report on the importance of configuration management. And then attend a Tripwire webcast to learn how to apply the principles.

Step Up.

How to improve your "up?" With Tripwire® for Network Devices. Tripwire software monitors and reports changes on network devices including switches, routers, firewalls, and load balancers across the enterprise.

More Up.

- It immediately detects and reports changes to network devices, so that you have instant visibility into potential issues.
- It tells you exactly what changed, who initiated the change, and which systems are affected—dramatically reducing troubleshooting time and limiting exposure.
- Manual and automatic rollback features enable you to quickly return systems to a known and trusted state, minimizing downtime.
- It enables you to enforce change management policies so that fewer service-affecting changes occur in the first place.

Check Up.

Regular baseline and conformance checks provide a running, auditable account of changes, making it faster and easier to comply with IT best practices, corporate policies, and regulatory requirements.

Free Up.

Because Tripwire software continuously monitors systems for change, your staff doesn't have to. A single web-based console lets them monitor thousands of devices. When an unexpected change occurs, comprehensive information is instantly sent to the right person. As a result, your staff is freed for more strategic initiatives.
