Change is constant. Make sure it's visible.

When you have visibility into changes on network servers, you also gain other important advantages. Higher system availability. Accountability. Data for audits and regulatory compliance. Visibility bestows the power to assure effective controls. Tripwire® provides the visibility.

A little illumination goes a long way.

Reserve your complimentary copy of the *The Visible Ops Handbook* and learn the four steps to leveraging increased visibility into powerful change management capabilities. And then attend a Tripwire webcast, where we'll show you how to take those steps in your organization.

See all.

Unanticipated changes can cause unplanned downtime and undesired consequences. With Tripwire for Servers and Tripwire Manager, however, any change to any server is identified and reported to you. Change may be unplanned, but you'll always know about it.

<http://visibility.tripwire.com>

Clarity delivers powerful advantages.

Tripwire for Servers and Tripwire Manager software improves server availability and staff accountability in four important ways:

- **It detects and reports changes** to servers, giving you instant visibility into potential issues.
- **It tells you exactly what changed**, who initiated the change, and which systems are affected—dramatically reducing troubleshooting time and limiting exposure.
- **Manual and automatic rollback features** enable you to quickly return servers to a known and trusted state, minimizing downtime.
- **It enables you to enforce change management policies** so that fewer service-affecting changes occur in the first place.

TRIPWIRE

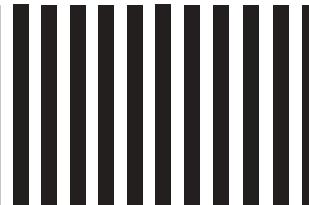

Clearly compliant.

Accountability rests on proof. Regular baseline and conformance checks provide a running, auditable account of changes, making it faster and easier to comply with IT best practices, corporate policies, and regulatory requirements.

Seeing is believing.

Powerful, detailed reporting capabilities allow you to take fast, appropriate action to minimize downtime, revenue loss, and costly recovery procedures. Because Tripwire software continuously monitors servers and proactively delivers change information, you have proof of effective controls. You can verify that intentional changes were made correctly. You'll know that patches work. And you're assured that unintended change is remedied appropriately.
